# alseda's SAP Payments Reconciliation Hub meets BW on HANA

SAP Payments Reconciliation Hub:

- Centralized tool that collects data from various layers.

- Facilitates reconciliation of SAP PE and SAP DM payment data.

- Matches the data to guarantee that information is consistent.

- Contributes directly or indirectly to the balance sheet and income statement preparation.

SAP BW on HANA:

- Converges database, data processing and application platform capabilities.

- Provides libraries for predictive, planning, text, spatial, and business analytics.

- Businesses are able to operate near real-time.

The benefits of alseda's SAP Payments Reconciliation Hub meets BW on HANA:

Analysis & Specification

- Delivery of pre-configured settings reduces the time and effort required from internal business users to analyse and specify the corresponding requirements.

Configuration & Testing

- The length of the development cycle for customization is reduced.

- As the configuration settings have been pre-tested, the risk of bugs & issues is significantly reduced.

- Test cases can be included in the delivery, which assist the business with test planning and initial configuration testing.

Project Costs

- The base cost of the implementation is reduced. Factors include: savings on the internal resources required (specification and testing), the corresponding time and effort from external sources (customization, error fixing and release management).

Technology

- Empowering near real-time decision making by leveraging SAP HANA high-performance analytic appliance.

Overall Project Timeline

- Substantial savings across the above mentioned project phases and deliverables result in a significantly shorter project.
