

alseda S2S 2.0 - INTEGRATION FROM CREDIT AGENCIES INTO SAP

The alseda S2S solution extends the SAP standard (ERP and S/4HANA), but also industry-specific solutions such as SAP Banking Services, IS-U, FSCM, with the functionalities of **several credit agencies**. These are connected directly from the SAP applications and not via additional middleware.

OVERVIEW

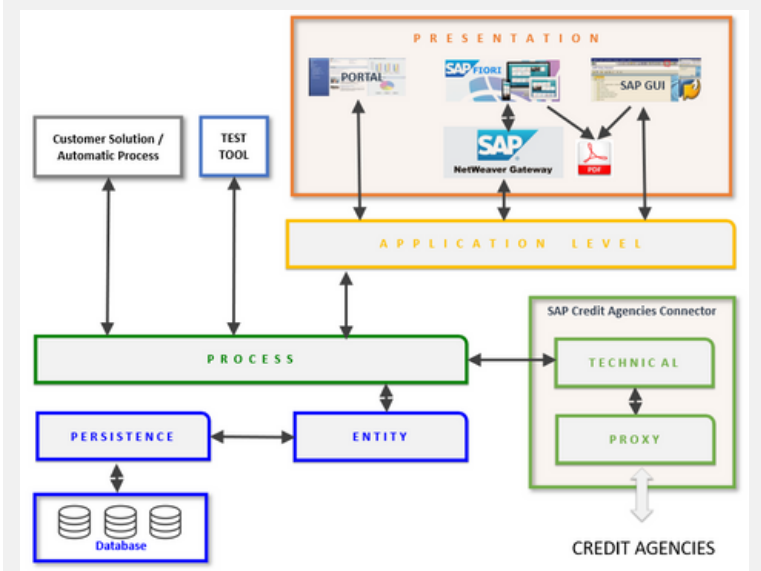

Fast-moving and complex markets make it difficult to keep risks calculable. Relying on discovering risks by chance only can easily threaten your very existence. That is why it is essential to use efficient and automated risk management. This way, risks can be detected and minimized at an early stage, and unpleasant experiences can be avoided.

The SAP-based S2S add-on solution extends the SAP standard to include the functionalities of several credit agencies and integrates them into the SAP landscape. Information can be obtained from those in real time and directly from SAP. The S2S solution has a very high flexibility and a low implementation effort, as individual settings can be made via SAP customizing.

S2S 2.0 SOLUTION

The S2S solution is based on the latest SAP technologies, such as SAP S/4HANA and SAP Cloud (BTP). The use of the new technologies has led to a significant reduction in the complexity of the software architecture. This also increases the flexibility of the S2S solution and reduces the implementation effort.

This means that an additional communication server is no longer required, as the connection between the S2S solution and the credit agencies' interface can be established directly from SAP. The external connector still required in the previous S2S versions is now integrated directly into the SAP on-premise system or the SAP Cloud (BTP).

ENQUIRIES, REPORTS AND SUBSEQUENT REPORT

- Can be entered directly in the SAP system via GUI, FIORI and SAP Portal or triggered by SAP and non-SAP processes.
- Consumer data that already exists in SAP or in non-SAP business partners is transferred.
- Enquiries are also possible for consumers that are not recorded in the system.
- Plausibility checks of the input data are included in accordance with the requirements of the credit agencies (mandatory/optional fields).
- The communication of enquiries, reports and subsequent reports can be carried out in real time and in batch mode.
- The S2S solution automatically assigns subsequent reports to corresponding SAP GP/non-SAP business partners. Of course, customer-specific enhancements are also considered.

ADVANTAGES AT A GLANCE

- Optimisation of business processes and risk minimisation
- Future-proof connections to various credit agencies with new technologies
- Centralised support and further development
- Customised adaptation to business processes
- Unrestricted usability of all current and future products and services of the credit agencies

GENERAL FUNCTIONALITIES

- SAP add-on, i.e. no modification of the SAP standard
- Connection to new communication interface of credit agencies
- Connection to credit agencies database directly from SAP without using middleware
- Low implementation effort
- High flexibility – individual settings via SAP customizing
- High automation – automatic generation of reports and automatic assignment of subsequent reports
- Complete integration into your own Business Workflow
- Extensive plausibility checks – avoidance of incomplete or incorrect enquiries or reports
- Very detailed authorization management
- Integration with SAP business partner or non-SAP CRM
- Requests and messages directly from SAP BP or non-SAP CRM
- History – requests, messages and information are stored in the database
- No additional hardware or third-party software required
